

# INQUIRY BASED LEARNING WORKSHOP FOR MATHEMATICS

April 4th, 2020  
8:30 a.m- 4:00 p.m

Inquiry Based Learning, or IBL for short, describes a broad range of empirically validated teaching methods which emphasize deeply engaging students and providing students with opportunities to learn authentically by collaborating with their peers. By supporting the use of a wide range of inquiry learning techniques in mathematics courses, IBL provides better instruction to students of all ages.

This workshop is for mathematics teachers in K-12 and higher education who would like to work together to make mathematics classes more engaging and impactful for students. During the morning session, you will learn how professors in higher education use IBL, including how they develop course materials and make decisions about content. In the afternoon, participants themselves will collaborate in an IBL activity culminating in development of materials for use in their own classrooms. Attend this workshop if you'd like to join a network of professionals interested in IBL who are willing to share teaching experiences and collaborate.

With special presenters: Bill McKenna, Carolyn Luna, Cody Patterson, and Priya V. Prasad

Registration is required, space is limited.  
For more information and registration go to  
<https://texancultures.utsa.edu/workshops/>

Hosted at the Institute of Texan Cultures  
Teachers will receive CPE credits for attendance.  
Lunch will be provided.
